This is the first time that the results of a large-scale, population-based, longitudinal study have been made available to the public, which is, in itself, a first. The 1994-1995 survey was applied to a representative sample of the adult population of the United States, and the results were made available to the public only 14 months after the beginning of the survey, and before the completion of the follow-up survey. The survey was conducted in the United States, and the results were made available to the public only 14 months after the beginning of the survey, and before the completion of the follow-up survey.
